Holistic Dichotomization

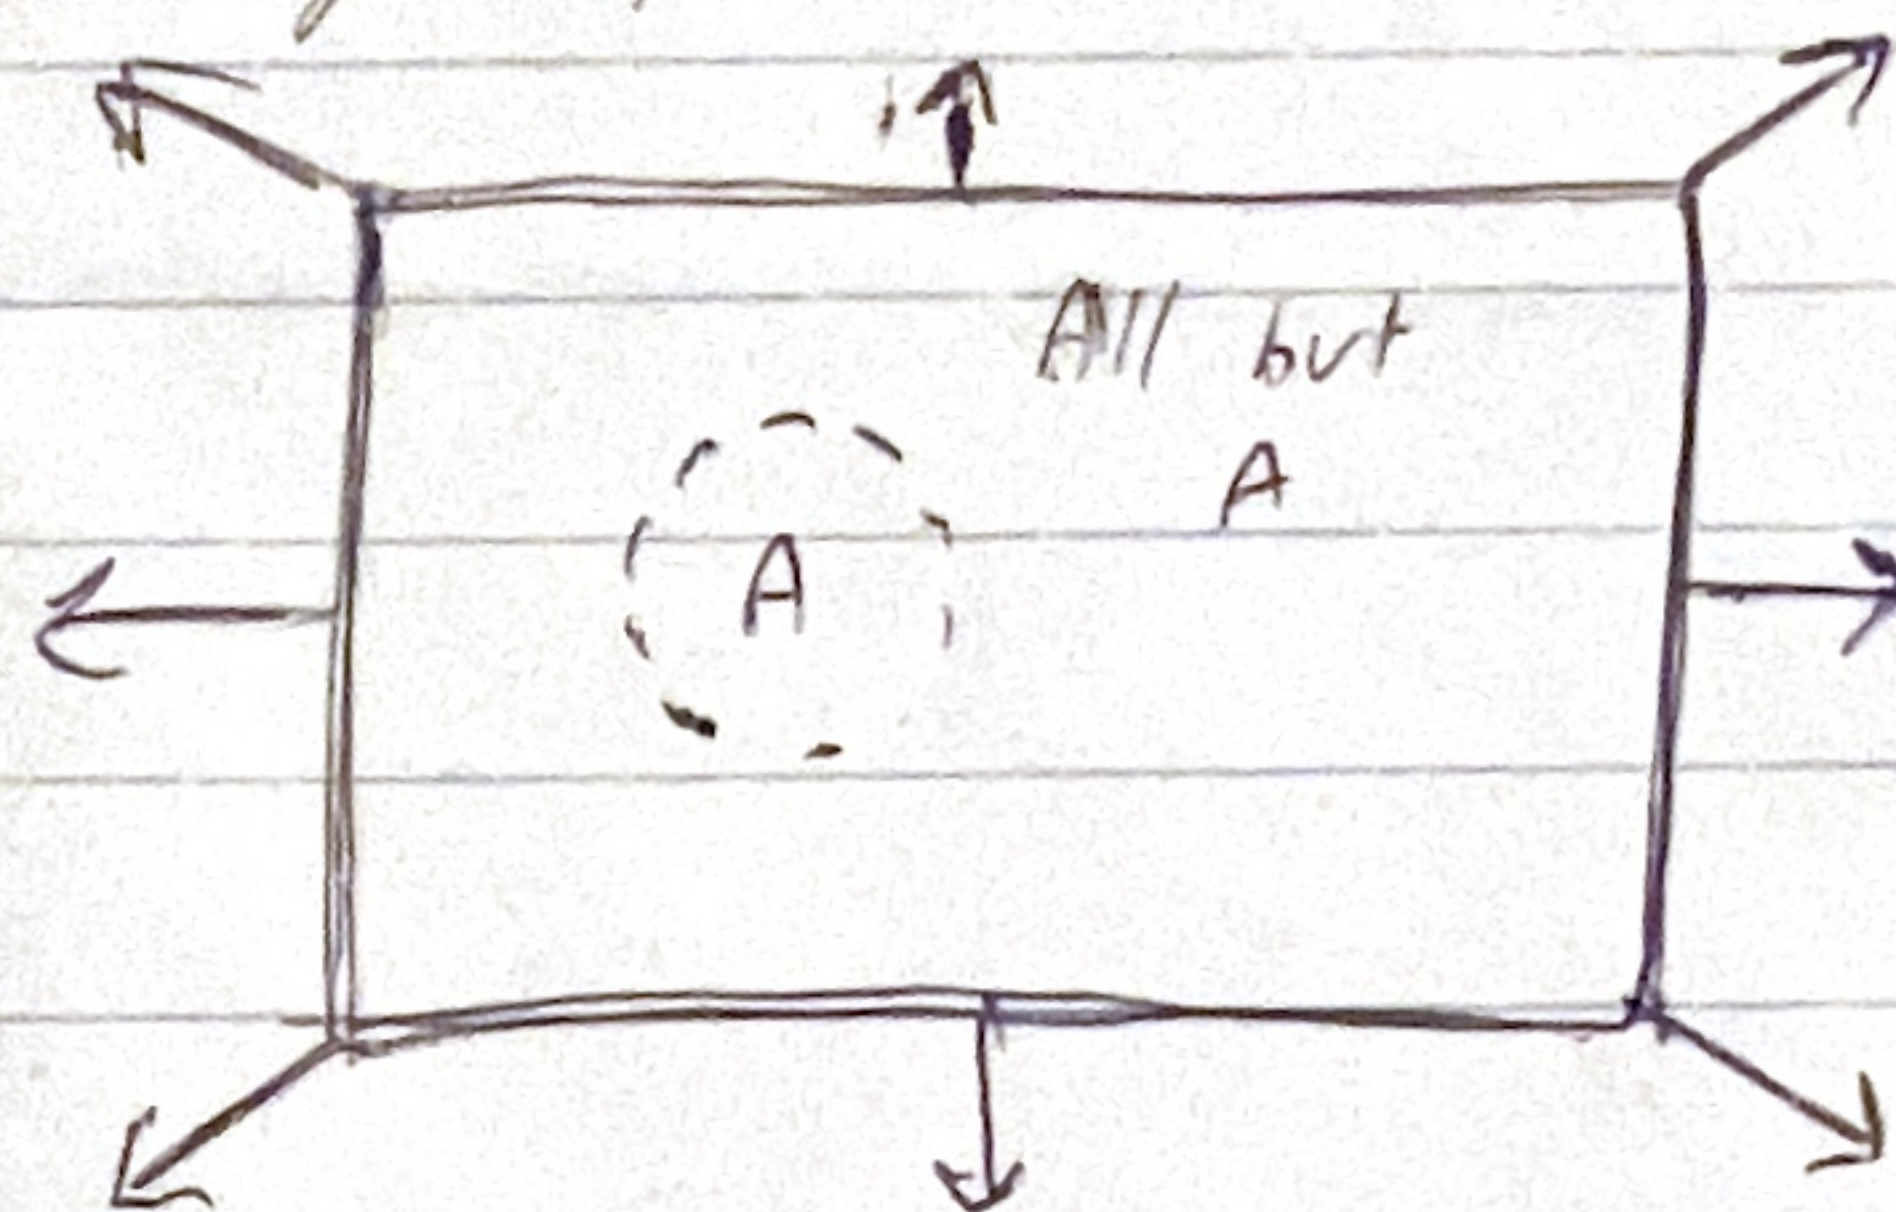

instead of a positive/negative dichotomization, consider a negative/double-negative dichotomization

Positive/negative

A / ~~all but A~~
any/all but A

Negative/double-negative

any/All but A / Not any/all but A

Example?

positive/negative (P/N)

Red / anything but red

negative/double negative (N/DN)

Anything but red / not anything but red

ITEM
17

while there remains a privileged center ("Transcendental Node"), ~~the N/DN dichotomization~~ as well as its dubious boundary, the ~~N/DN~~ N/DN dichotomization involves a doubling over of its territory, encompassing any area that may have been marginalized into ~~inaccessibility~~ inaccountedness
